

Upgrade Solution

What is an ES125 ?

The ES125 Electrostat (1251) series was an analog DC motor speed control manufactured by WER Industrial (later Emerson Industrial Controls) from approximately 1975 to 1985. It was used to control DC Shunt Wound or Permanent Motors from 1/4 to 5HP from single phase 120vac or 240vac power.

What replaces the ES125 ?

We no longer manufacture nor participate in the single-phase DC drive side of the business which spans ¼ thru 5HP. We recommend contacting Minarik Drives for their selection of [Minarik DC drives](#) to replace the Focus 2.

A good point of contact for the Minarik Drives DC series is Brandon Jones.
Brandon Jones can be reached at the following:
