

Upgrade Solution

What is an Electrostat 60 ?

The ES60 (1250) series was an analog DC motor speed control manufactured by WER Industrial (later Emerson Industrial Controls) from approximately 1975 to 1985. It was used to control DC Shunt Wound or Permanent Motors from 1/4 to 2HP from single phase 120vac or 240vac power.

What replaces the ES60 ?

We no longer manufacture nor participate in the single-phase DC drive side of the business which spans ¼ thru 5HP. We recommend contacting Minarik Drives for their selection of [Minarik DC drives](#) to replace the ES60.

A good point of contact for the Minarik Drives DC series is Brandon Jones.
Brandon Jones can be reached at the following:
